

BAT BOX.

Michelmersh Brick Holdings PLC are pleased to announce that it can provide purpose made bat boxes in any of our products, which can be incorporated into brickwork to give a seamless finish to an ecological application.

Bats are one of the most threatened types of mammals in Britain. MBH's integrated bat boxes are designed to provide bats with alternative roosting places to replace their diminished natural habitat and to encourage them into areas where there are no natural sites. Made from fabrics which are insulating and suitable for bat colonisation, with a rough interior for grip, they provide an internal space for bats to roost and can be incorporated into the elevations of brick buildings.

Integrated brick bat boxes work for both bats and buildings, giving a discrete home and finish. They are maintenance free and satisfy any conservation obligations.

MBH Bat Boxes

- Providing artificial roosting areas
- Integrated into the fabric of the building
- Discreet and visually pleasing
- Made from bat friendly materials
- Available in any MBH product to match the brickwork

Positioning of bat boxes is critical and we would suggest you contact an ecological specialist for advice. All bats are protected by law and it is illegal to disturb any bat whilst it is roosting or to handle a bat without a licence. You should contact your local wildlife trust or the Bat Conservation Trust if you have any queries relating to bats, their habitats or wellbeing.

Integrated. Discrete. Ecological.
